DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8 and 32, drawn to lithographic projection apparatus and device manufacturing method, classified in class 355, subclass 53.
- II. Claims 10-27, drawn to projection apparatus cleaning system, classified in class 438, subclass 633.
- III. Claims 28-31, drawn to fluid cleaning system and method of cleaning, classified in class 510, subclass 108.
- IV. Claims 33 and 34, drawn to contaminant detector, classified in class 356, subclass 237.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different invention I is directed toward projection apparatus and method of manufacturing a device from the apparatus and II is directed toward cleaning system for projection apparatus.

Inventions II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant

Art Unit: 2851

case, the combination as claimed does not require the particulars of the subcombination as claimed because other types of fluid cleaning system can be used by the projection apparatus. The subcombination has separate utility which is not limited to the projection apparatus.

Inventions III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different invention III is for fluid cleaning and IV is for detecting contaminants.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for one group is not required for other groups, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
